CORRECTION FACTORS

Steel FE 360	1	Copper	0.12	Aluminum	0.2	Brass	0.34	Stainless S. V2A 1 / 2 mm	0.75
--------------	---	--------	------	----------	-----	-------	------	---------------------------	------

Note: the operating distance of the sensor must be multiplied by the correction factor of the material. For example, the operating distance on Aluminum is $S_{n, Al} = S_n \times CF_{Al}$. In case of embeddable mounting, the distance is multiplied by the additional correction factor of the support, thus $S_{n, Al} = S_n \times CF_{Al} \times CF_{emb, Al}$.
